# Parvez Hossen

ph.cse.bd@gmail.com | +8801568079422 | LinkedIn | GitHub

## Summary

Backend engineer with 3 years of experience building production Python services (Django, DRF, FastAPI) for e-commerce, logistics, and property platforms, plus the LLM features that sit on top of them, with end-to-end ownership from data modelling and async pipelines through testing, deployment, and production monitoring. Available immediately.

## Education

**Dhaka University of Engineering & Technology (DUET), Gazipur** **2018 – 2023**
*Bachelor of Science in Computer Science and Engineering (CSE)* *CGPA: 3.35/4.00*

## Technical Skills

**Languages:** Python, SQL, JavaScript
**Backend:** Django, Django REST Framework, FastAPI, Celery, Redis, WebSockets (Django Channels), Stripe
**AI/LLM:** LLM APIs (OpenAI-compatible), RAG, embeddings & vector search, AI agents, MCP, Ollama, prompt design, grounding & fallback handling, Claude Code, GitHub Copilot
**Databases:** PostgreSQL, MySQL, MongoDB, Vector DB
**DevOps:** Docker, Nginx, GitHub CI/CD, AWS, DigitalOcean, Linux, Terraform, Kubernetes
**Testing & Observability:** pytest, Prometheus, Grafana, structured logging, request-ID tracing
**Frontend:** Next.js, React, TypeScript, TailwindCSS

## Experience

**DevsMotion** **Aug 2025 – Oct 2026**
*Software Engineer (Part-time, Remote)* *Banani, Dhaka*

**Jonmobhoomi** — bilingual (Bangla/English) SaaS platform for safe land & property transactions

- Designed a policy-based RBAC engine (11 roles, 57 permissions, DENY-wins, Redis-cached) and an append-only audit trail (actor, before/after diffs, IP, request ID, severity) made tamper-proof by a PostgreSQL trigger as well as the ORM, with Prometheus counters per event category.
- Implemented a phase-gated due-diligence workflow: versioned bilingual checklist templates, blacklist auto-reject gates, role-gated sign-offs, and Celery-generated PDF reports.
- Designed abuse controls for OTP and auth endpoints — layered DRF throttles plus Redis per-user/per-phone/per-day spend limits with SHA-256-hashed keys to keep plaintext PII out of the cache.
- Modelled listings search on PostgreSQL generated tsvector columns with weighted GIN indexes and SearchRank; covered the platform with 100+ pytest modules on a Dockerized, CI-deployed stack.

**GrocerAI** — e-commerce backend for an AI-powered grocery delivery platform

- Built the core Django REST Framework services — catalog, ordering, payments, order tracking — and integrated the LLM meal-planning agent service behind them, with typed timeout/connection error mapping and Django Channels WebSocket progress streaming so long model runs stay responsive.

**Victoria Express** — backend for a logistics and express-delivery platform

- Built delivery-order management with live tracking, WebSocket notifications, merchant fraud reporting, and async processing via Celery and Redis.

**Merchantbay LTD** **Dec 2023 – Apr 2026**
*Software Engineer* *Uttara, Dhaka*

**Warehouse Management System** — Merchantbay B2B sourcing platform

- Developed modules for purchase planning, stock entry, inventory tracking, and unit conversion with Django/DRF and PostgreSQL, improving performance and reliability of the platform's backend services.

**AI Fashion Sourcing Platform**

- Built an AI-powered fashion sourcing platform: FastAPI service doing RAG over a product corpus with locally hosted LLMs (Ollama), PostgreSQL storage, and a Streamlit interface for buyers.

**Client Project** — Adzi Trims Limited

- Designed a scalable Django/DRF/PostgreSQL backend achieving a 10× performance improvement; added Prometheus and Grafana monitoring.

## Open Source

**Bangladesh2024Archive** — national archive of the July–August Revolution

- Developed the YouTube data-collection module with Celery async tasks and Django Channels notifications; added media hashing to prevent duplicate uploads and HLS conversion for video streaming.
- Built admin-panel APIs, deployed the system on AWS, and configured Nginx caching to reduce API response times and server load.

## Achievements & Certifications

- Solved 800+ algorithmic problems on LeetCode and Codeforces — contest ratings 1752 and 1130.
- Certifications: Machine Learning A-Z (Udemy, 2025) · Google Advanced Data Analytics (Coursera, 2023).
