Summary

Full-stack developer with 3 years of experience building Django, FastAPI, and Next.js systems for e-commerce, logistics, and property platforms, including production AI/LLM features (RAG, agents), with end-to-end ownership from API to UI, deployment, and monitoring. Available immediately.

Education

Dhaka University of Engineering & Technology (DUET), Gazipur **2018 – 2023**
Bachelor of Science in Computer Science and Engineering (CSE) *CGPA: 3.35/4.00*

Technical Skills

Languages: Python, SQL, JavaScript
Backend: Django, Django REST Framework, FastAPI, Celery, Redis, WebSockets (Django Channels), Stripe
AI/LLM: AI Agents, RAG, MCP, Ollama, Claude Code, GitHub Copilot
Databases: PostgreSQL, MySQL, MongoDB, Vector DB
DevOps: Docker, Nginx, GitHub CI/CD, AWS, Linux, Terraform, Kubernetes, Prometheus, Grafana
Frontend: Next.js (App Router), React, TypeScript, TanStack Query, Zustand, TailwindCSS
Mobile: Flutter (BLoC, GetX, Dio)

Experience

DevsMotion **Aug 2025 – Oct 2026**
Software Engineer (Part-time, Remote) *Banani, Dhaka*

Jonmobhoomi — bilingual (Bangla/English) SaaS platform for safe land & property transactions

- Designed and built a policy-based RBAC engine (11 roles, 57 permissions, DENY-wins resolution, region scoping, Redis-cached) and an immutable audit trail enforced at both the ORM and PostgreSQL-trigger level.
- Implemented a phase-gated due-diligence case workflow: bilingual checklist templates with draft-to-publish versioning, blacklist auto-reject gates, role-gated sign-offs, and Celery-generated PDF reports.
- Built JWT auth (email/phone OTP, Google sign-in), KYC with field-level encryption of national IDs, Bangla/English i18n, and Prometheus/Grafana monitoring on a Dockerized stack.
- Built the admin and user Next.js apps (App Router, TypeScript): a BFF session proxy with HttpOnly refresh-token rotation, permission-gated navigation, Bangla-first i18n, a multi-step listing wizard, and Stripe checkout, tested with Vitest and Playwright.

GrocerAI — e-commerce backend for an AI-powered grocery delivery platform

- Built core e-commerce services with Django REST Framework — catalog, ordering, payment-gateway integration and order tracking — plus WebSocket real-time updates and Celery/Redis jobs.

Victoria Express — logistics and express-delivery platform (backend + management dashboard)

- Built delivery-order management with live tracking, WebSocket notifications, fraud-detection checks on incoming orders, and async processing via Celery and Redis.
- Built the Next.js/TypeScript management dashboard: role-scoped views for 8 roles via parallel routes and middleware guards, live WebSocket tracking, bulk actions, and filterable data tables.

Merchantbay LTD **Dec 2023 – Apr 2026**
Software Engineer *Uttara, Dhaka*

Warehouse Management System — Merchantbay B2B sourcing platform

- Developed modules for purchase planning, stock entry, inventory tracking, and unit conversion with Django/DRF and PostgreSQL, improving performance and reliability of the platform's backend services.

AI Fashion Sourcing Platform

- Built an AI-powered fashion sourcing platform with FastAPI and RAG over locally hosted LLMs (Ollama), PostgreSQL, and a Streamlit interface.

Client Project — Adzi Trims Limited

- Designed and developed a scalable backend with Django, DRF, and PostgreSQL, achieving a 10× performance improvement; integrated Prometheus and Grafana monitoring and collaborated on the React frontend.

Open Source

Bangladesh2024Archive — national archive of the July–August Revolution

- Developed the YouTube data-collection module with Celery async tasks and Django Channels notifications; added media hashing to prevent duplicate uploads and HLS conversion for video streaming.
- Built admin-panel APIs, deployed on AWS, and configured Nginx caching to cut API response times.

Achievements & Certifications

- Solved 800+ algorithmic problems on LeetCode and Codeforces — contest ratings 1752 and 1130.
- Certifications: Machine Learning A-Z (Udemy, 2025) · Google Advanced Data Analytics (Coursera, 2023).
