Summary

Mobile app developer with 3 years of software engineering experience, including 1+ year shipping three production Flutter apps for logistics and e-commerce platforms, backed by Django REST and WebSocket APIs I also build — end-to-end ownership from UI through API, release engineering, and CI/CD, with a daily AI-assisted workflow (Claude Code, GitHub Copilot). Available immediately.

Education

Dhaka University of Engineering & Technology (DUET), Gazipur **2018 – 2023**
Bachelor of Science in Computer Science and Engineering (CSE) *CGPA: 3.35/4.00*

Technical Skills

Languages: Dart, Python, SQL, JavaScript
Mobile: Flutter, BLoC, GetX, go_router, Dio, WebSockets, FCM push, flutter_stripe, Google Maps, biometrics, secure storage
Backend: Django, Django REST Framework, Django Channels, Celery, Redis, Stripe
Auth: JWT (refresh rotation & blacklisting), OAuth2 social login (Google/Facebook/Apple), OTP, biometric device credentials, Keycloak (OIDC)
AI & Agent Tools: Claude Code, GitHub Copilot, AI Agents, RAG, MCP
Databases: PostgreSQL, MySQL, MongoDB, Vector DB
DevOps: Docker, GitHub Actions CI/CD, AWS, Nginx, Linux, Terraform, Kubernetes

Experience

DevsMotion **Aug 2025 – Oct 2026**
Software Engineer (Part-time, Remote) *Banani, Dhaka*

Victoria Express — courier & express-delivery platform (merchant & rider Flutter apps, Django backend, Next.js admin)

- Built the merchant and rider Flutter apps with BLoC and go_router — parcel booking with live price preview, COD deposits, wallets and settlements, KYC, and fraud reporting — covered by an automated test suite in CI.
- Engineered a resilient Dio stack: single-flight JWT refresh-token rotation, safety-aware retries with backoff and jitter, stale-while-revalidate response caching, and idempotency keys preventing duplicate submissions on flaky networks.
- Built an offline-first rider workflow — a persistent action queue replaying status updates and cash collections with reused idempotency keys on reconnect — plus QR parcel scanning, OTP proof of delivery, and bulk operations.
- Hardened both apps after a security audit: AES-256-GCM encryption of local data (keys in Keystore/Keychain), biometric login with rotating device-bound secrets, screenshot blocking, log redaction, and obfuscated R8 builds.
- Delivered real-time UX over my Django Channels backend — WebSocket notifications with handshake-header auth and session revocation, FCM push with deep-link routing — plus a GitHub Actions security pipeline (tests, HTTPS transport gate, gitleaks).
- Built the Next.js/TypeScript admin dashboard — role-scoped views for 8 roles, live WebSocket tracking, and bulk actions.

GrocerAI — AI-powered grocery ordering platform (Flutter app, Django backend, FastAPI AI agent)

- Shipped the production Flutter app with GetX state management and per-route dependency-injection bindings across 13 feature-first modules.
- Built a Dio client with a JWT auto-refresh interceptor that gates concurrent refreshes behind a single completer.
- Implemented the AI ordering journey: preference quiz, a WebSocket screen streaming the cart-building agent's progress with silent auto-retry, multi-vendor cart comparison, bid cart, checkout, and order tracking.
- Integrated Stripe card tokenization with saved payment methods, Google Sign-In, a Google Maps pin-drop address picker with Places autocomplete, and FCM push notifications.
- Built the backing Django/DRF services — 100+ REST endpoints, JWT plus Google/Facebook/Apple social auth, Stripe payments, Django Channels WebSockets — and a GitHub Actions unsigned-iOS build pipeline.

Merchantbay LTD **Dec 2023 – Apr 2026**
Software Engineer *Uttara, Dhaka*

Merchantbay Platform — B2B apparel sourcing platform

- Developed warehouse management modules with Django/DRF and PostgreSQL; built an AI fashion-sourcing platform with FastAPI and RAG over local LLMs (Ollama).

Open Source

Bangladesh2024Archive — national archive of the July–August Revolution

- Developed the YouTube data-collection module with Celery tasks, Channels notifications, media-hash dedupe, and HLS conversion.

Achievements & Certifications

- Solved 800+ algorithmic problems on LeetCode and Codeforces — contest ratings 1752 and 1130.
- Certifications: Machine Learning A-Z (Udemy, 2025) · Google Advanced Data Analytics (Coursera, 2023).
